

In pain or scared of fall

Not eating enough calories and protein

Physiotherapy Series:

Feeling шеак all the time

Wasting

of thigh

**S** Forms of Strengthening Exercise

Eating less than 5-6 taels of meat a day

- Muscle process loss occurs as а normal of aging. "Sarcopenia" refers to a clinical condition in which muscle loss becomes severe
- The loss of muscle mass results in a reduction in strength, causing a decline in mobility and balance. This increases the risk of falling and fall-related complications such as fractures and death
- How can we regain our muscle strength? The method is simple. It just requires improving dietary intake, doing muscle strengthening exercises and adding in moderate intensity aerobic exercises

### Notes for the Elderly When Doing Strengthening Exercises

Choice of Weight

Options include water bottles, sandbags, body weight or weight training equipment

Amount πf Weight

Start with lighter weights:

such as a sandbag of 1-2 pounds, water bottles filled with 300-500ml water, or bending down to a lesser degree in a squat exercise

exercises

Hmount of Aim to do 8-10 exercises that target major muscle groups

Number пf Repetitions Aim to do 10-15 repetitions of each exercise as 1 set, 1-3 sets for each exercise with breaks of 2-3 minutes in between every time. Do this 2-3 times a week (alternate day)

During exercise

Moderate effort should be felt while exerting without provoking any discomfort

After exercise Mild tiredness should be felt over the involved muscle after exercise, and no pain nor excessive muscle soreness should be felt on the day after exercise

## Lift a Water Bottle from Below Knee in a Sitting Position

**Effect** 

Improve arm strength

Target area

Muscles at the front of upper arm, back of shoulder and upper back

Equipment

A water bottle filled with 300-500ml water

### Starting position

- Sit with legs apart and feet on the ground, sitting up straight without leaning on the backrest
- Hold the water bottle with your right hand between your thighs at a level lower than your knees, and then put your left hand on your left thigh

#### Steps

- 1. Lift the bottle up to the right side of your waist
- 2. Hold for 5 seconds. You should feel tightness over the muscles around your upper arm, shoulder blades and upper back
- 3. Relax and resume the starting position

## Number of Repetitions

 Repeat 10-15 times with your right arm, then repeat the exercise with your left arm

### Lift a Water Bottle from Shoulder Level in a Sitting Position

Effect

Improve arm strength

Target area

Muscles at the back of upper arm, front of shoulder, and upper back

Equipment

A water bottle filled with 300-500ml water

## Starting position

- Sit with legs apart and feet on the ground, sitting up straight without leaning on the backrest
- Hold the water bottle with your right hand to the side of your right shoulder, and put your left hand on your left thigh

### Steps

- 1. Straighten your right arm to lift the bottle to the front and above right shoulder
- Hold for 5 seconds. You should feel tightness over the muscles at the back of your upper arm, anterior shoulder and upper back
- 3. Relax and resume the starting position

### Number of Repetitions

 Repeat 10-15 times with your right arm, then repeat the exercise with your left arm

## Knee Extension with an Ankle Weight in a Sitting Position

Effect

Strengthen the thigh muscles, reduce risk of fall and protect the knee joints

Target area

Muscles over the front of the thigh and lower leg

Equipment

Start by using a sandbag or home-made rice bag of 1-2 pounds

### Starting position

- Secure a cuff weight over your ankle while seated
- Sit with your back against the backrest of the chair and grasp the sides of the seat

### Steps

- 1. Point your toes up and straighten your right knee slowly
- 2. Hold for 5 seconds. You should feel tightness over the muscles at the front of the thigh and lower leg
- 3. Relax and resume the starting position

## Number of Repetitions

 Repeat 10-15 times with your right leg, then repeat the exercise with your left leg

### Sideway Leg Lift with an Ankle Weight in a Standing Position

**Effect** 

Strengthen the leg muscles and improve sideways balance

Target area

Muscles over the side of hips and waist

Equipment

- Start by using a sandbag or home-made rice bag of 1-2 pounds
- A sturdy chair with high backrest or stable handrail of appropriate height

### Starting position

- Secure a cuff weight over your ankle while seated
- Stand up and hold onto the backrest of a sturdy chair or handrail

### Steps

- 1. One leg at a time, lift your leg to the side 1-2 feet off the ground
- 2. Hold for 5 seconds. You should feel tightness over the muscles at side of your hips and back
- 3. Relax and lower your leg to the starting position

### Number of Repetitions

 Repeat 10-15 times in each leg, alternatively between both legs

# Knee Lift with an Ankle Weight in a Standing Position

**Effect** 

Improve balance and posture

Target area

Muscles over hips, abdomen and back

Equipment

- Start by using a sandbag or home-made rice bag of 1-2 pounds
- A sturdy chair with high backrest or stable handrail of appropriate height

Starting position

• Secure a cuff weight over your ankle while seated

 Stand up and hold onto the backrest of a sturdy chair or handrail

Steps

- 1. Lift your right knee to about 90 degrees while keeping your back straight by tightening up your abdomen and hips
- 2. Hold for 5 seconds. You should feel tightness over the muscles over your hips, abdomen and back
- 3. Relax and resume the starting position

Number of Repetitions

 Repeat 10-15 times in each leg, alternatively between both legs

### Heel Raise in a Standing Position

**Effect** 

Strengthen lower leg muscles and improve gait speed

Target area

Calf muscles

Equipment

**EXECCISE** A sturdy chair with high backrest or stable handrail of appropriate height

Bodyweight

### Starting position

- Hold onto the backrest of a sturdy chair
- Stand with feet apart at shoulder width

#### Steps

- 1. Raise your heels so that you are standing on your toes. Keep your back straight
- 2. Hold for 5 seconds. You should feel tightness over your calf muscles
- 3. Relax and lower your heels to resume the starting position

### Number of Repetitions

Repeat 10-15 times

## 7 Mini Squat

**Effect** 

Improve leg strength, which can help with going up and down the stairs, and protect the knee joints

Target area

Muscles over buttocks and anterior thighs

Equipment

A sturdy chair with high backrest or stable handrail of appropriate height

### Starting position

- Stand with feet apart with feet slightly wider than shoulder width and hold onto the backrest of a sturdy chair
- Point your toes outward slightly

#### Steps

- Squat down slightly; your hips should move downward and backward, your abdomen tightened and trunk leaning forward
- 2. Keep your back straight. Your knees should be right above your toes, and should not go in front of your toes
- 3. Hold for 5 seconds. You should feel tightness over the muscle at the front of your thigh and buttocks
- 4. Relax and then resume standing posture

Number of Repetitions

Repeat 10-15 times

### Arm Chair Pushup

Bodyweight exercise

**Effect** 

Improve strength of arms and posture

Target area

Muscles over the back of upper arms, shoulders and upper body

Equipment

A sturdy and stable chair that allows bearing body weight over the armrests

## Starting position

- Put the chair with its back against the wall, sitting up straight without leaning on the backrest
- Hold on the armrest firmly with both hands

### Steps

- 1. Push on the armrests with both arms until the buttocks are lifted up
- 2. Hold for 5 seconds. You should feel tightness over the muscles over your upper arm, shoulders and upper body
- 3. Relax and resume sitting posture

Number of Repetitions

Repeat 10-15 times

## General Safety Precautions for Exercise

- 1 Progress gradually according to your own capacity
- Make sure to maintain proper posture and correct movement throughout the exercise. You should breathe normally throughout, or breathe out during exertion of effort
- Use a sturdy chair with high backrest or stable handrail of appropriate height
- 4 Perform warm up and stretching exercises before the main workout
- 5 Perform cool down and stretching exercises after completion of the main workout
- 6 Patients with chronic diseases, such as coronary heart disease, hypertension, diabetes, arthritis, and so on, should consult a doctor or physiotherapist before exercising
- 7 Do not perform these exercises if there is an unhealed wound, recent fracture, sprain or joint dislocation, severe pain or severe osteoporosis
- 8 Stop if you feel any discomfort while exercising. If the discomfort persists or becomes severe, seek urgent medical advice

Please consult a physiotherapist or other healthcare professionals if you have any queries about this pamphlet
